

ARISTAVIVA
CGI | VR

TEAM

We are **ARISTATIVA**, an architectural studio specialized in digitalization and **architectural visualization** to bring your ideas to life.

We create high-quality CGI images and **photo-realistic visualizations** that will enrich, shape and contextualize your planning, interior design and architectural marketing projects.

Founded and run by architects, we offer an end-to-end service which includes the development of full architectural project or parts not yet completed, as well as any interior design components that will enhance your images.

We service property developers, architectural studios, urban planners, construction companies and interior design studios who want a high-quality, **time and cost-effective solution** for their visualization needs.

OUR SERVICES

Do you need an expert studio who truly understands your architectural project and helps you unleash the potential of CGI visualizations?

Are you looking for a professional, high-quality image to reflect your creative vision into reality?

- CGI images (exterior and interior)
- Architectural development
- Interior design development
- Urban planning
- Architectural animations
- Virtual Reality and 360 tours
- Architectural digital communication (website development and other complementary designs)

OUR APPROACH

- Quality is everything and we offer competitive prices
- We'll do anything to have a solid and positive communication with you and your team.
- We'll always set clear timelines and guarantee timely deliverables
- We provide your extra revisions to ensure your satisfaction
- We offer for free new ideas and counselling for your project

ARISTATIVA AROUND THE WORLD

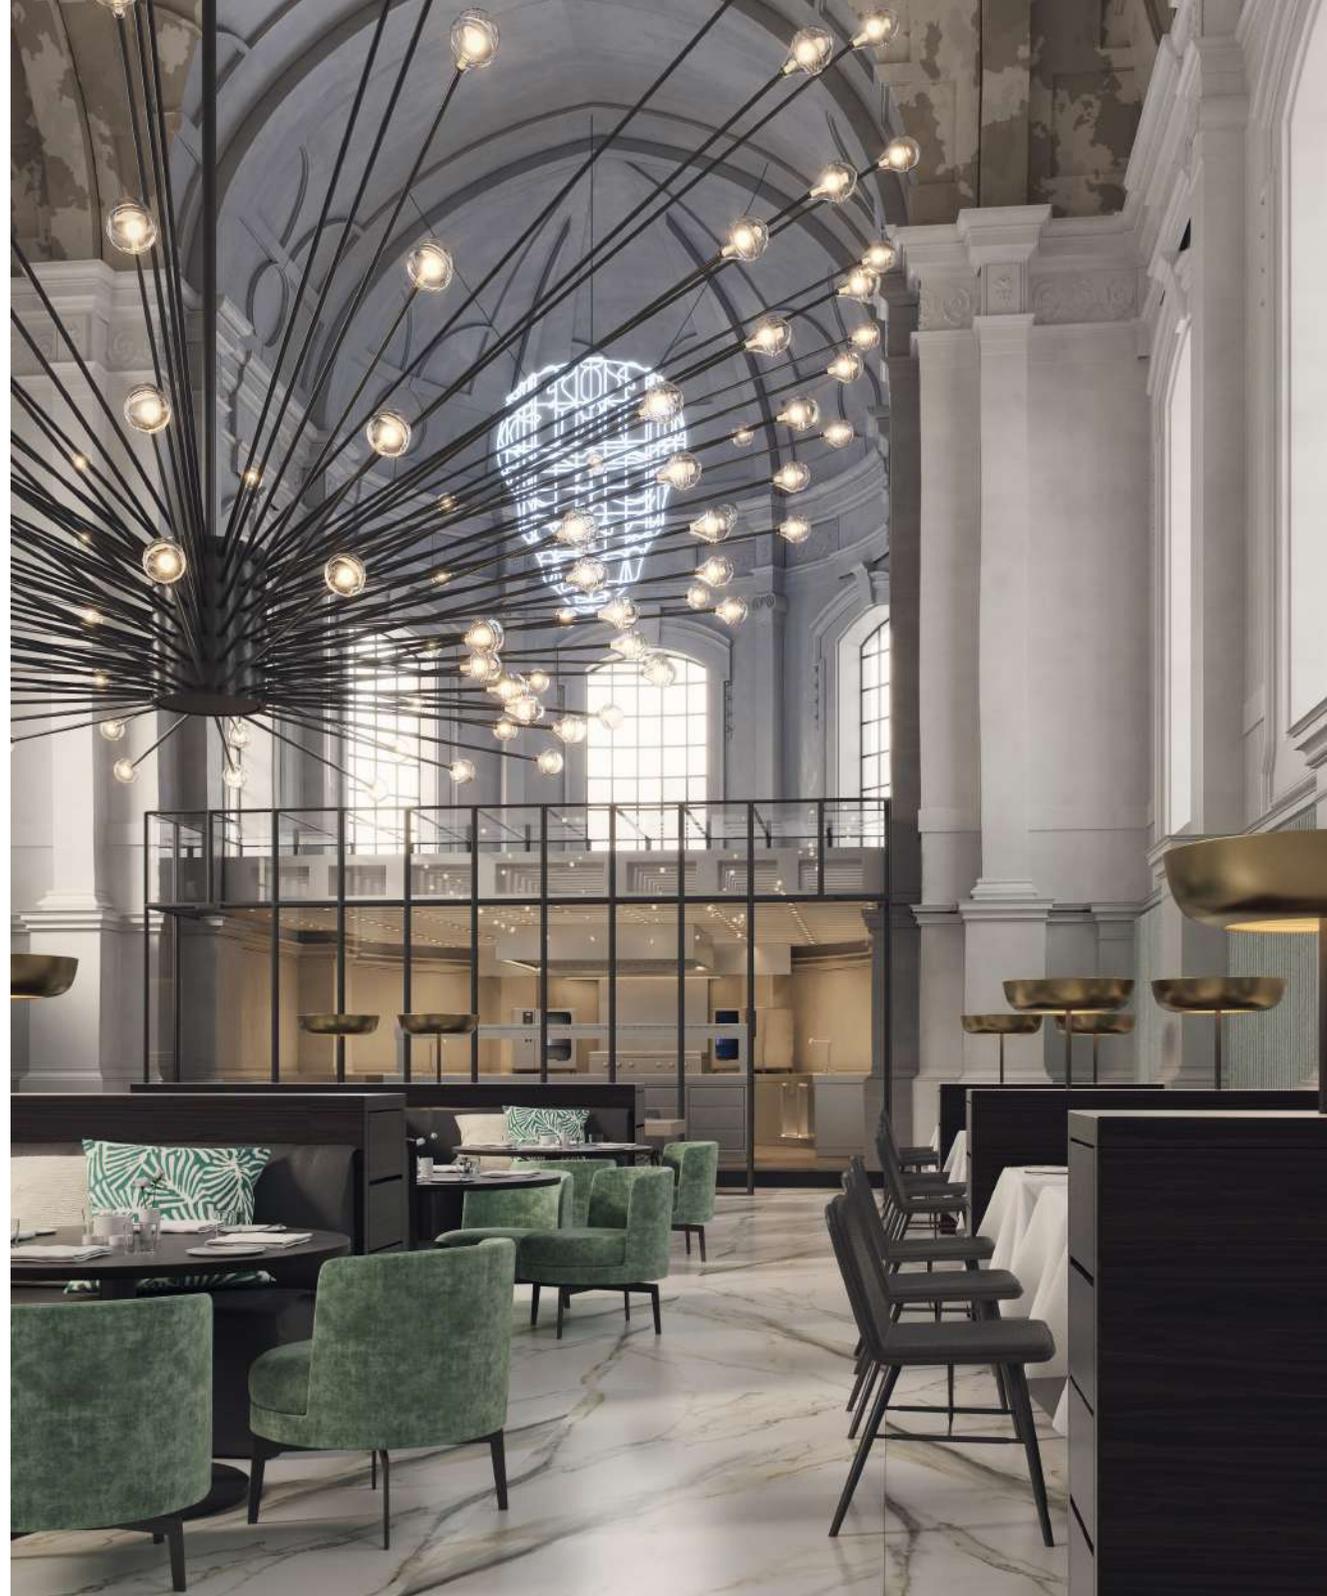

An abandoned antique church is reconciled with its surroundings by providing a **new space for interaction and socialization**.

We seek to generate sensations in the viewer through powerful images where architecture is shown as a life facilitator and the scenario where individual stories happen.

The image places strong value on the use of **natural light** coming through the big windows with the additional support of indoor light.

In urban development, **architecture** plays an **essential role** in reshaping the aesthetics and functionality of cities.

We want to see the talent and conceptual visions from architects and urban planners reflected in the images. To achieve this, we integrate projects into the urban plan while **providing them with life and movement**, as the most distinct characteristic from cities.

Architecture can transform cities and **photorealistic images help us understand and anticipate these changes**.

Architectural visualizations are a channel to help us **visualize everyday situations** in an environment that is still unbuilt.

It is the viewer who through **the images imagines his life in the proposed space**, giving the project the necessary subjectivity and feelings.

The spaces and the cities' architecture which we inhabit cannot be understood stripped of all context or in isolation from the surroundings.

The natural environment enhances architecture through direct internal-external relationships and visual focal points which are generated thanks to the dialogue with the surroundings.

The presence of nature like vegetation, water or mountains, provide us with known **elements that help us improve the understanding of the project** and create a good visual composition of the image.

Lighting defines the style we want to communicate with the image by representing the architecture at different times of the day. Depending on the type of lighting chosen, the image focuses on different audiences and aspirations.

Photorealistic images are created to enhance perceptions in the viewer and communicate the project's intent through lighting, materials and architecture.

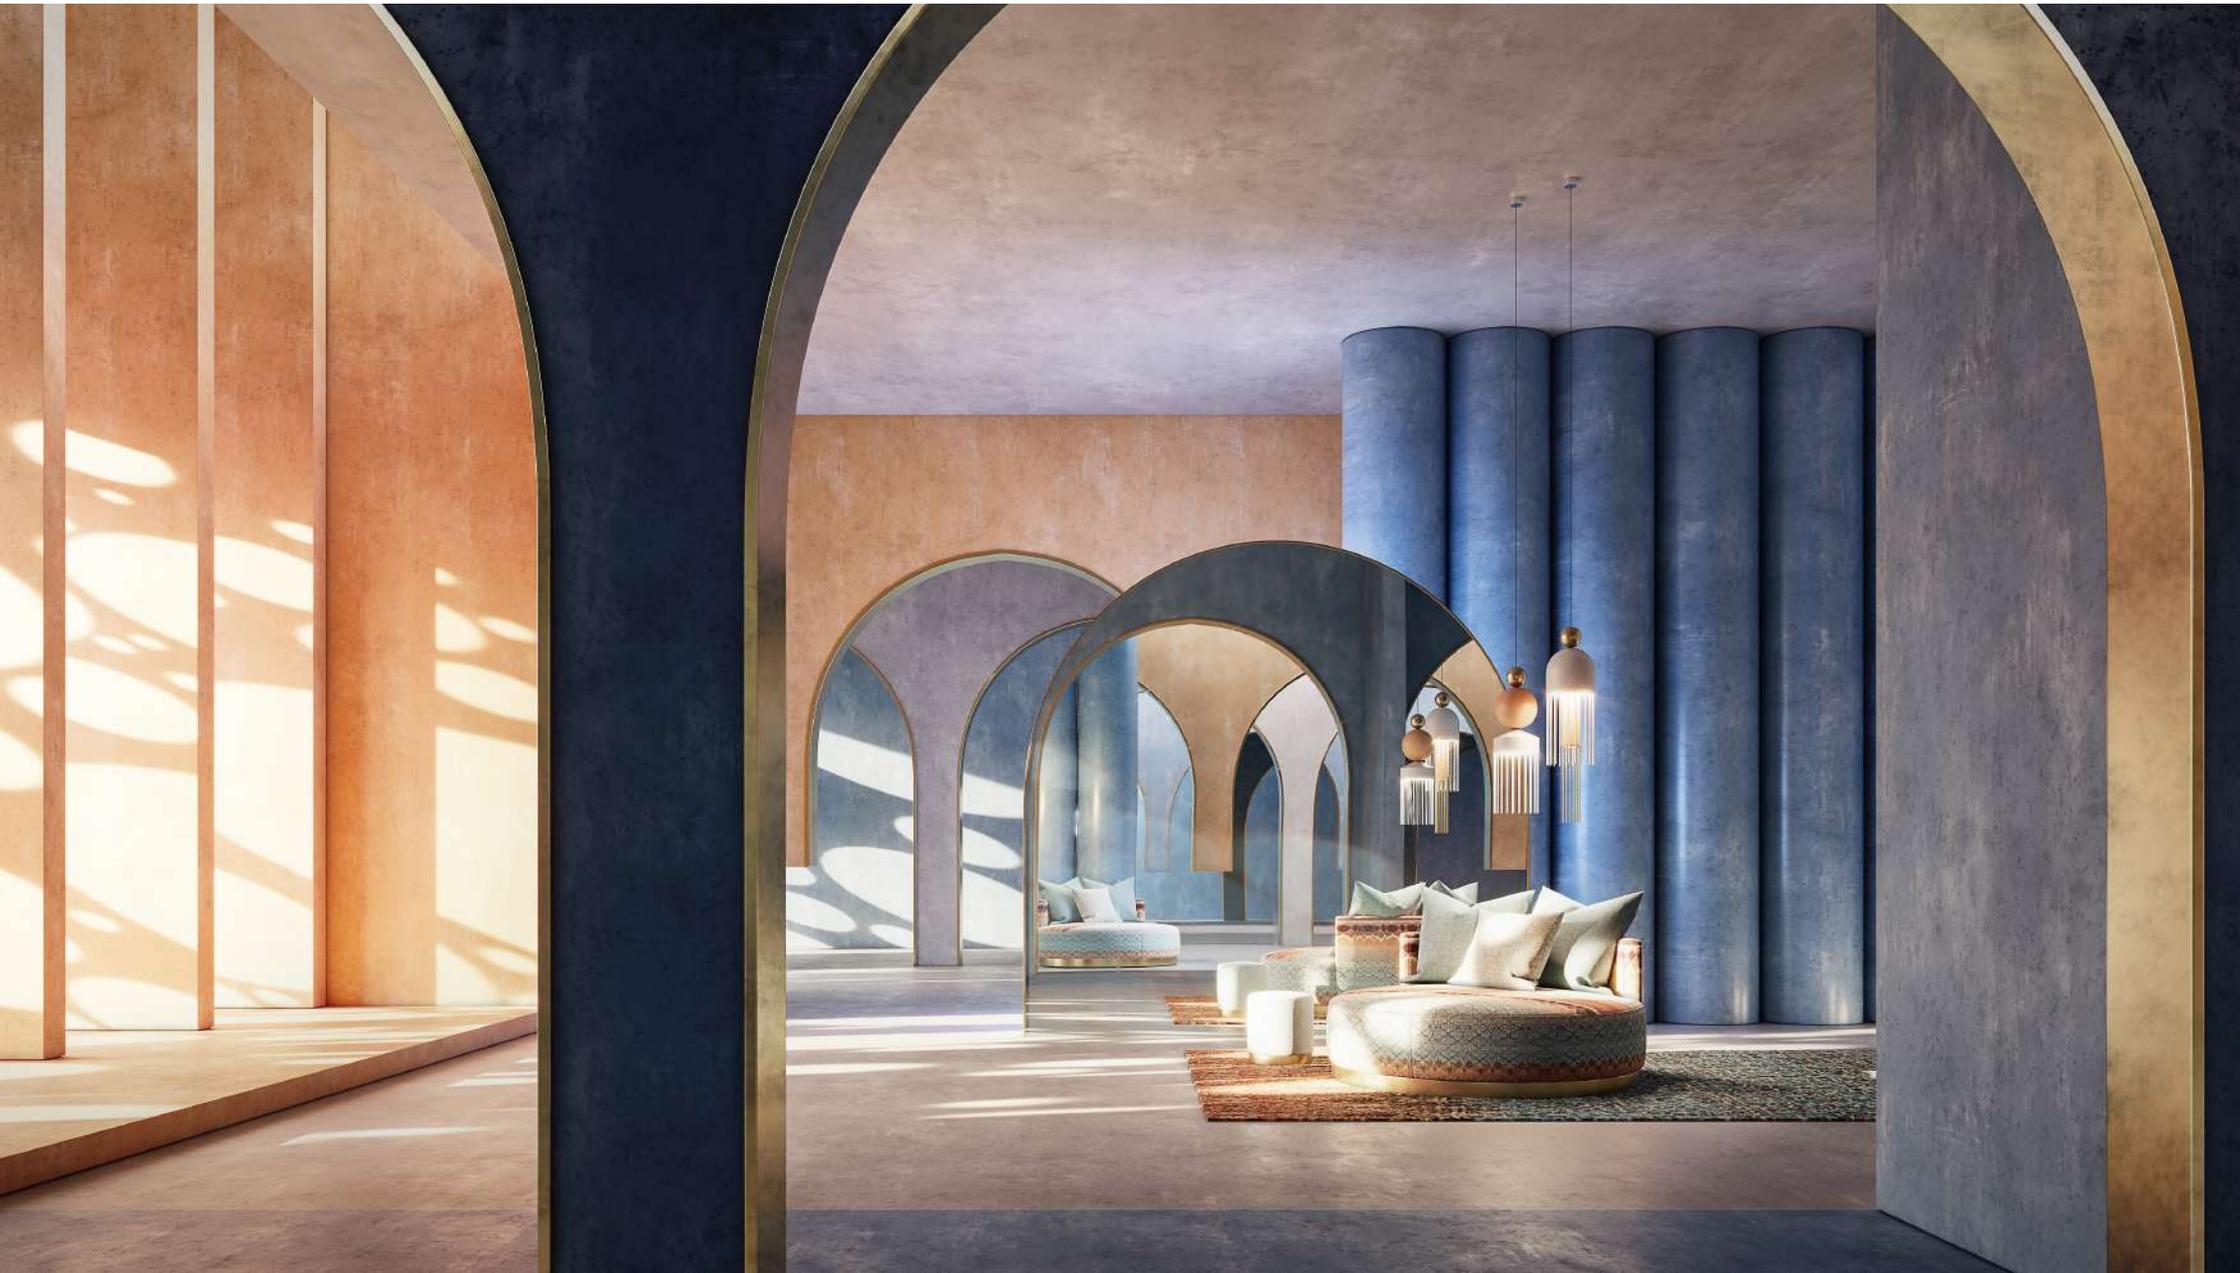

In architectural visualizations the possibilities are endless and not constrained by the limitations of an implemented project.

Creating a photorealistic set of images for your architectural or interior design project before the development work starts has become a key factor to market your entrepreneurial project and **open your brand to new business opportunities worldwide.**

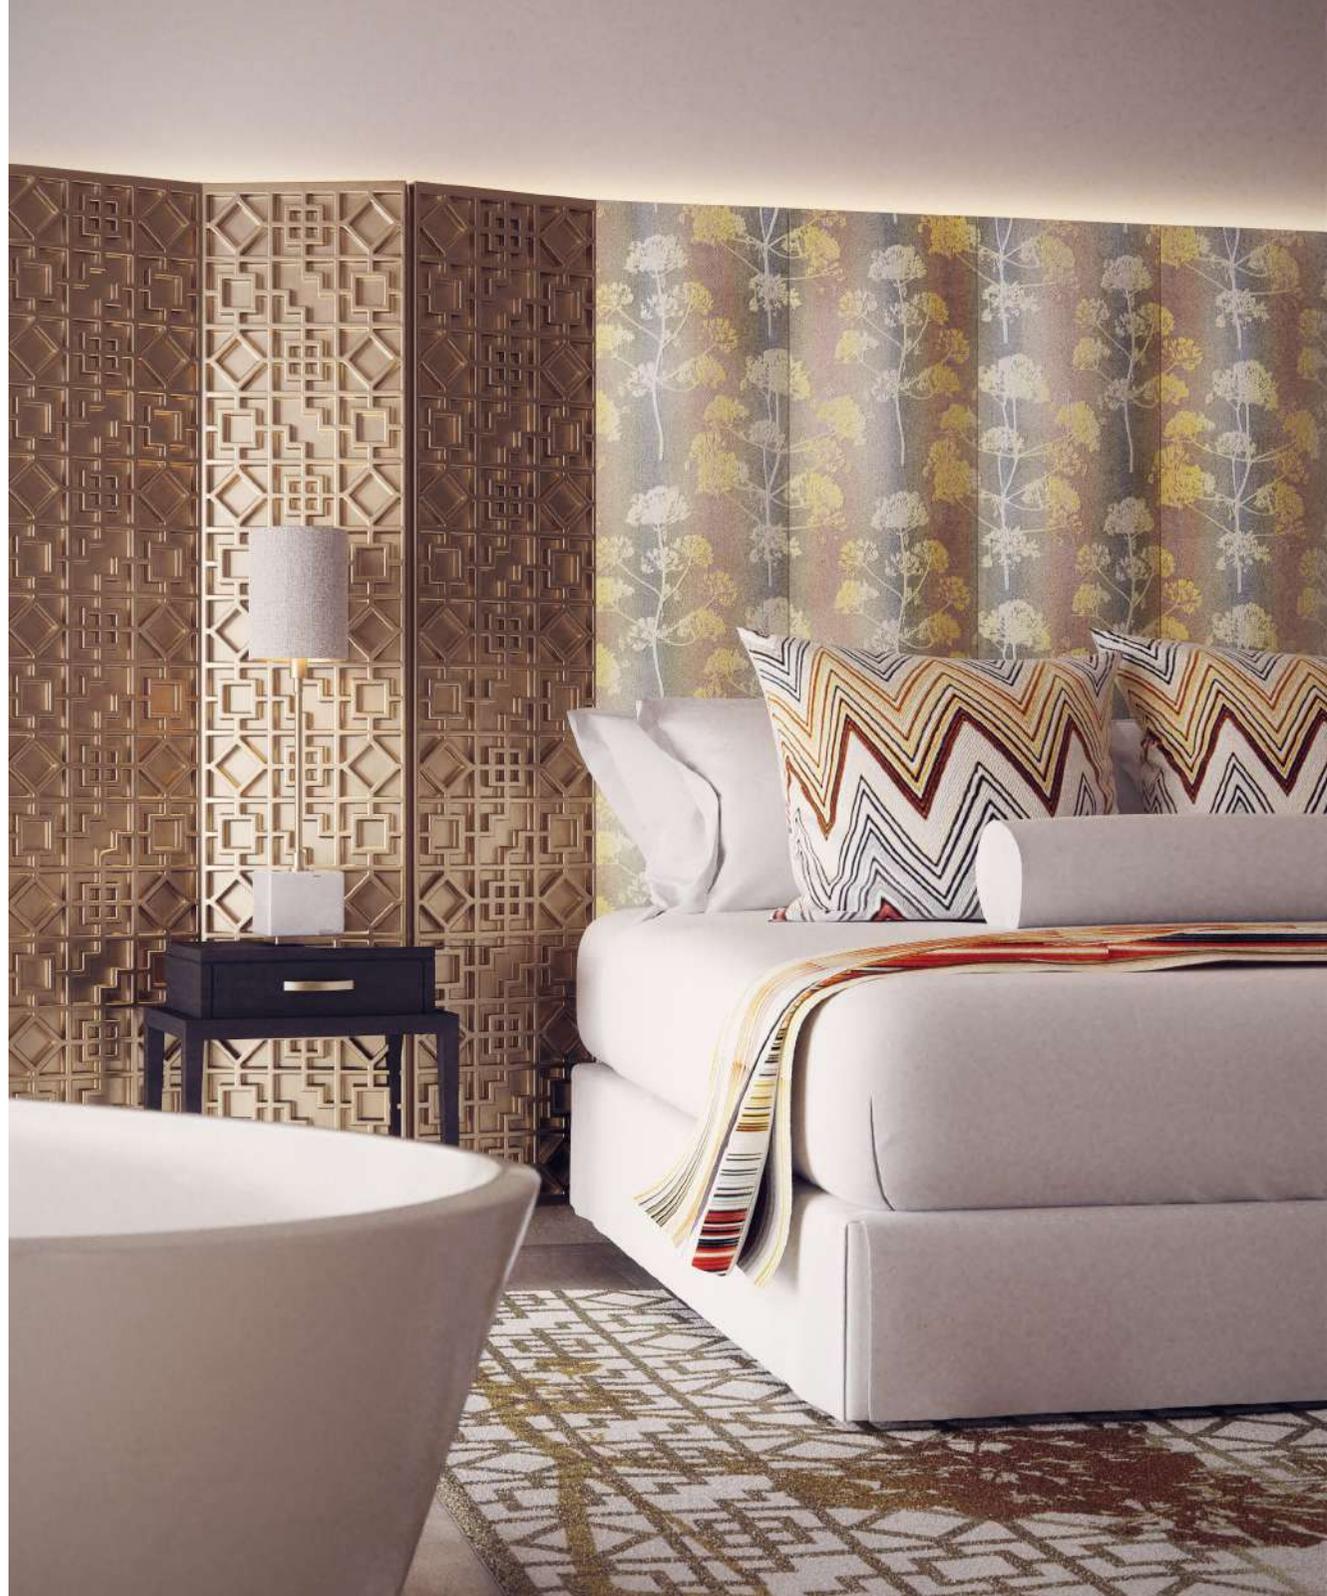

In interior design **we must change the scale in which we think and work.**

A complete architectural and **interior design project requires a greater accuracy** to be true to all the details envisioned.

The **lighting set up** of the space, the geometry of the **furniture** or the **materials** used are fundamental parts to reach the desired level.

The **exclusivity of interior architecture** is one of the main **guidelines** on which we base this type of images. Our goal is to show the designer's ideas in the most reliable and artistic way possible.
